

Plant and Machinery Safety Checklist

This checklist checks the condition of heavy machinery (e.g., excavators, forklifts, cranes) and ensures proper maintenance, guarding, and operator training.

- Are all plant and machinery inspections up to date?
- Are operators properly trained and certified?
- Are pre-start checks completed before using machinery?
- Are guards and safety barriers installed and functional?
- Are emergency stop buttons easily accessible and working?
- Are warning signs and labels clearly displayed?
- Is plant and machinery regularly maintained and serviced?
- Are fuel and oil leaks inspected and addressed?
- Are noise levels assessed and controlled?
- Are safe operating procedures followed for all machinery?
- Are rotating parts adequately guarded?
- Are seatbelts and operator restraints used where required?
- Are machinery paths clear of obstacles?
- Are reversing alarms and flashing beacons functional?
- Are lockout/tagout procedures in place for maintenance work?
